

# Jailbreak an iPhone, iPod Touch, or iPad

Written By: Brad Chailland

## TOOLS:

- [Computer \(1\)](#)
- [Internet connection \(1\)](#)

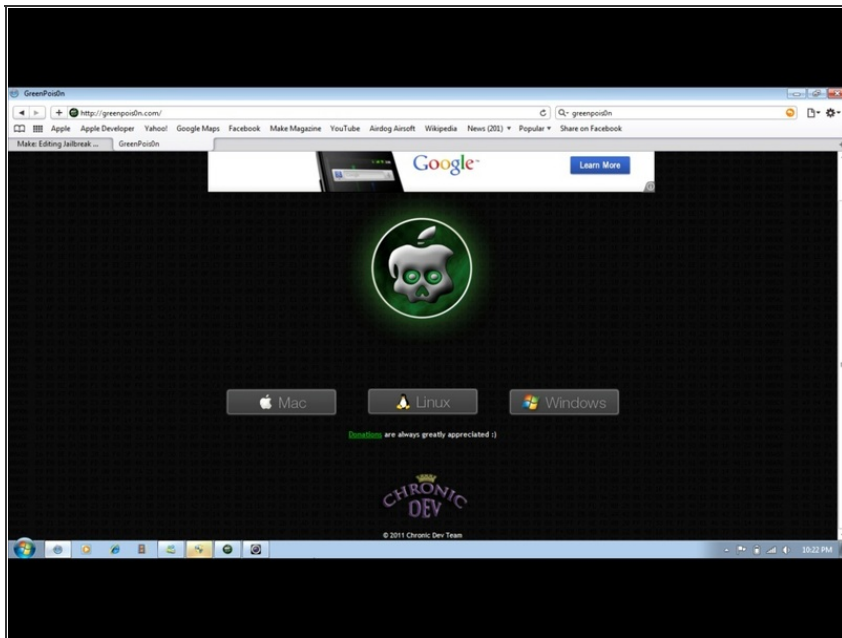

## PARTS:

- [IPod USB connector \(1\)](#)

## SUMMARY

This process will allow you to run third-party apps. You will also be able to do other things that Apple doesn't want you to be able to do and have more fun on your device.

## Step 1 — Jailbreak an iPhone, iPod Touch, or iPad

- First, go to greenpois0n.com and download the software for your Mac or Windows computer.
- Plug your Apple device into your computer.
- Now that you have downloaded the software and plugged in your device you are ready to start jailbreaking.

## Step 2

- Next, run the Greenpois0n software, and turn off your device.
- Once you have done that click on "Prepare to jailbreak." Follow all directions on the screen!
- Then, click on "Jailbreak," and wait for your device.

### Step 3

- Lastly, make sure that your device has Cydia installed.
- If it does then you're done! If it doesn't, try again.
